C - Converter

Single Message Transform

Stream vs. Message Processing

Stream Processing

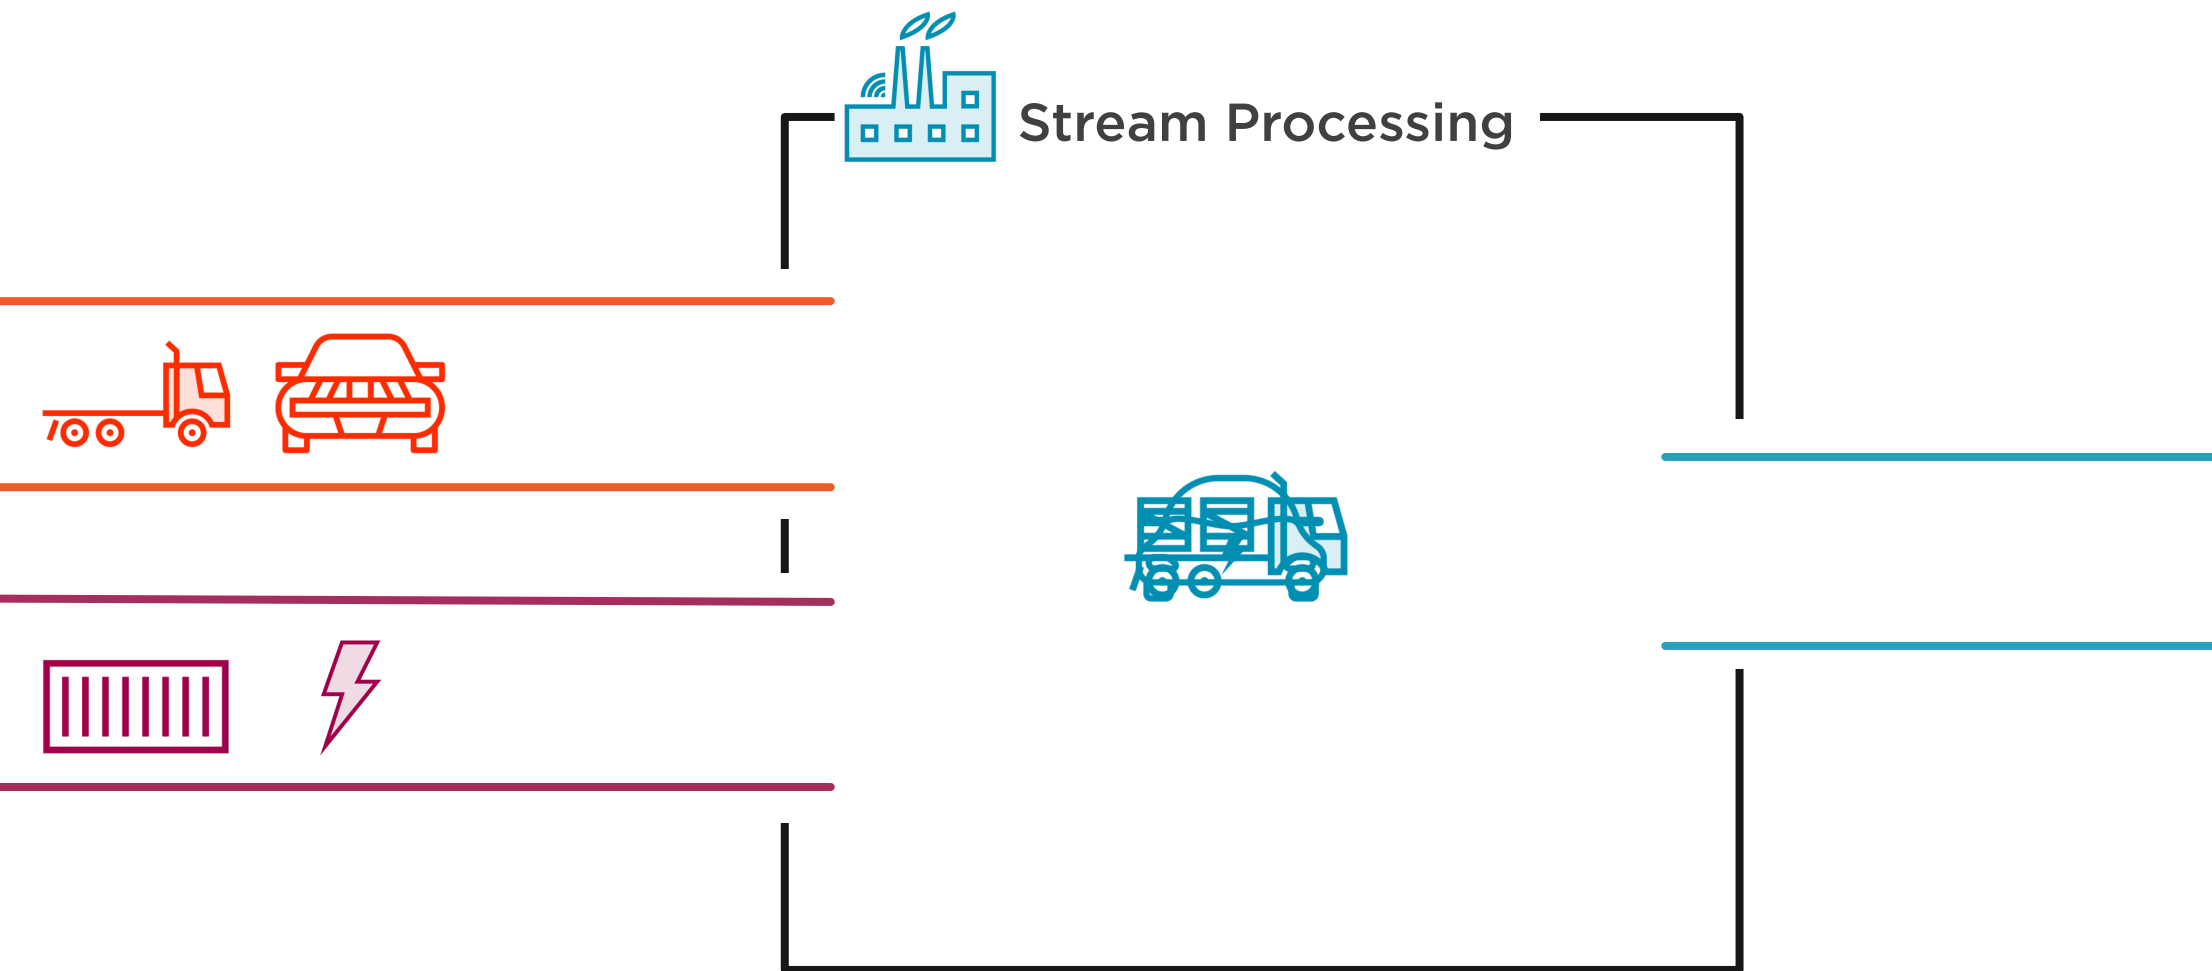

Has access to multiple data streams

Message Processing

Has access to only one data stream

Stream Processing

Stream Processing

Joining

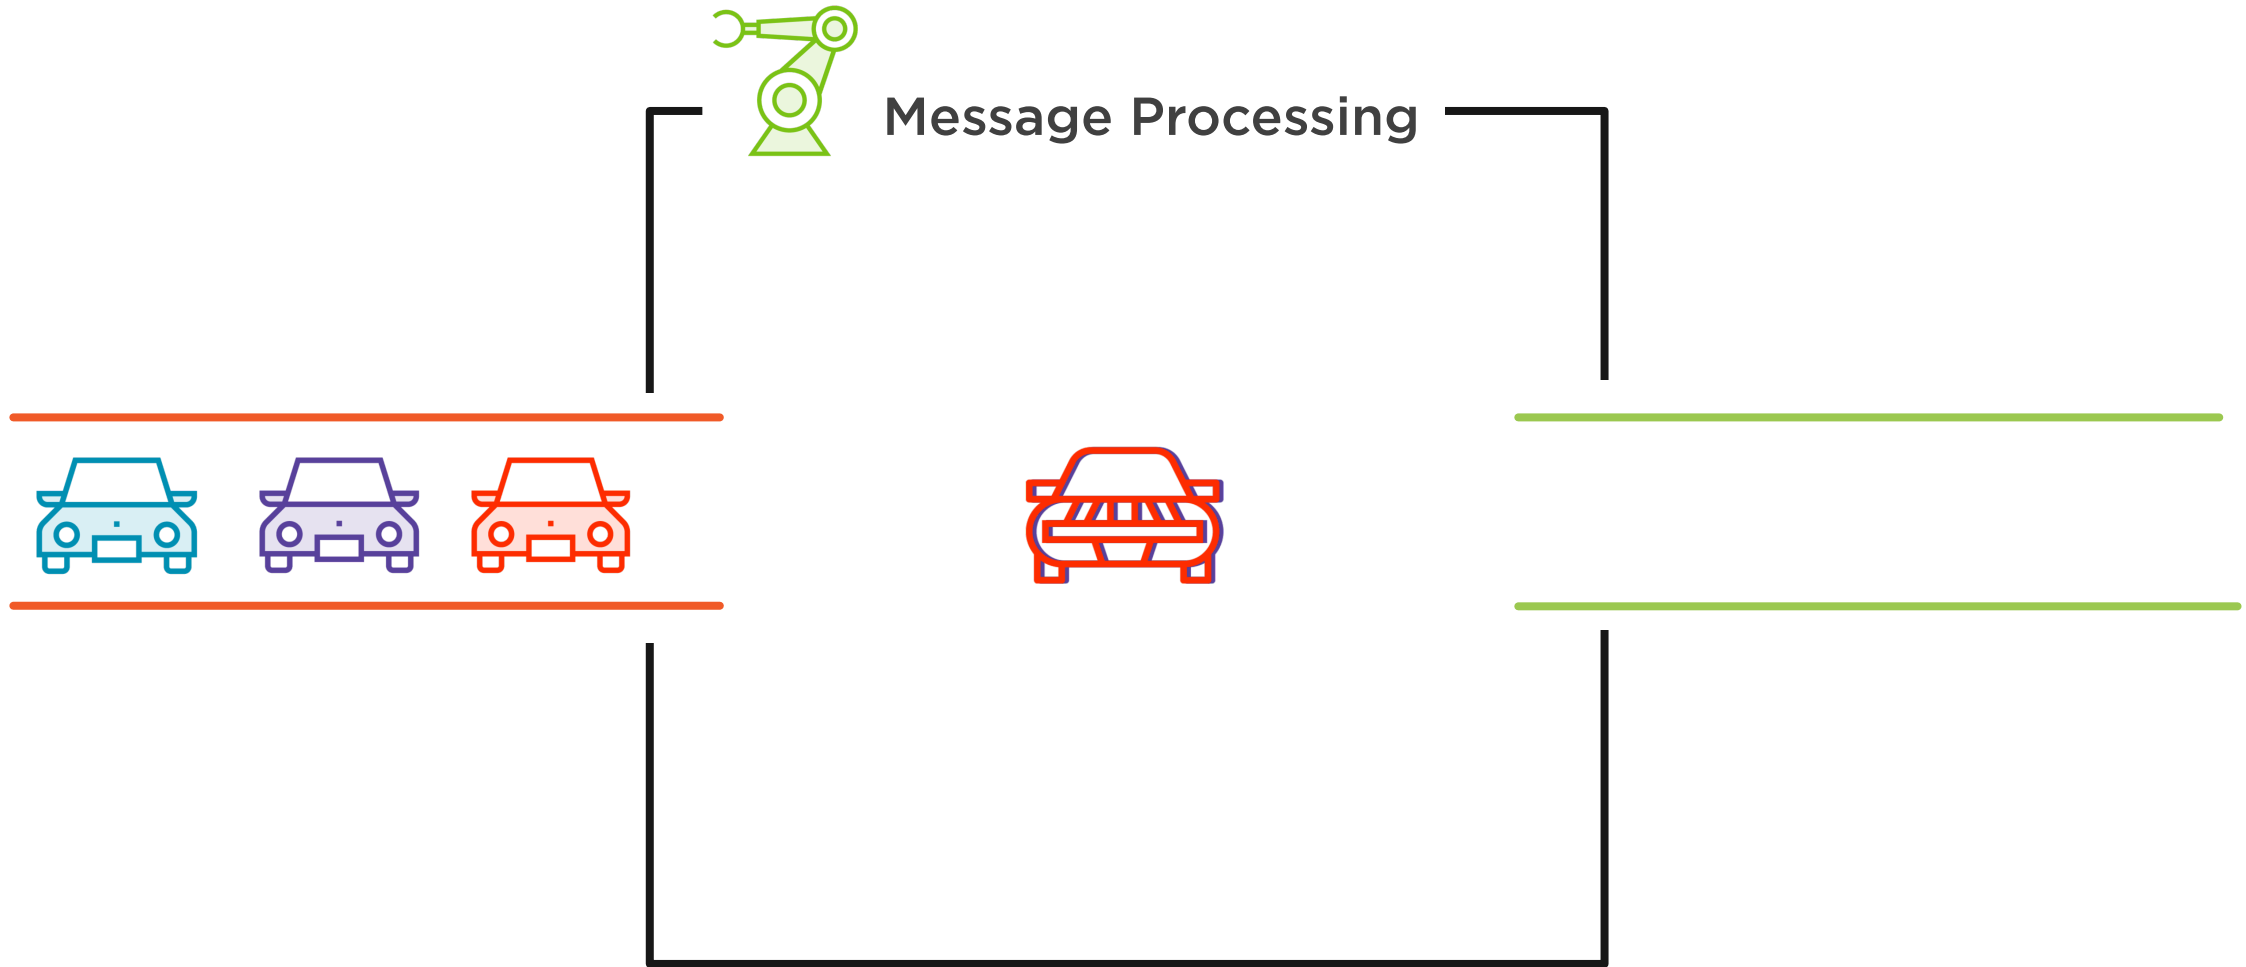

Per-Message Processing

Aggregating

Windowing

Message Processing

Single Message Transform

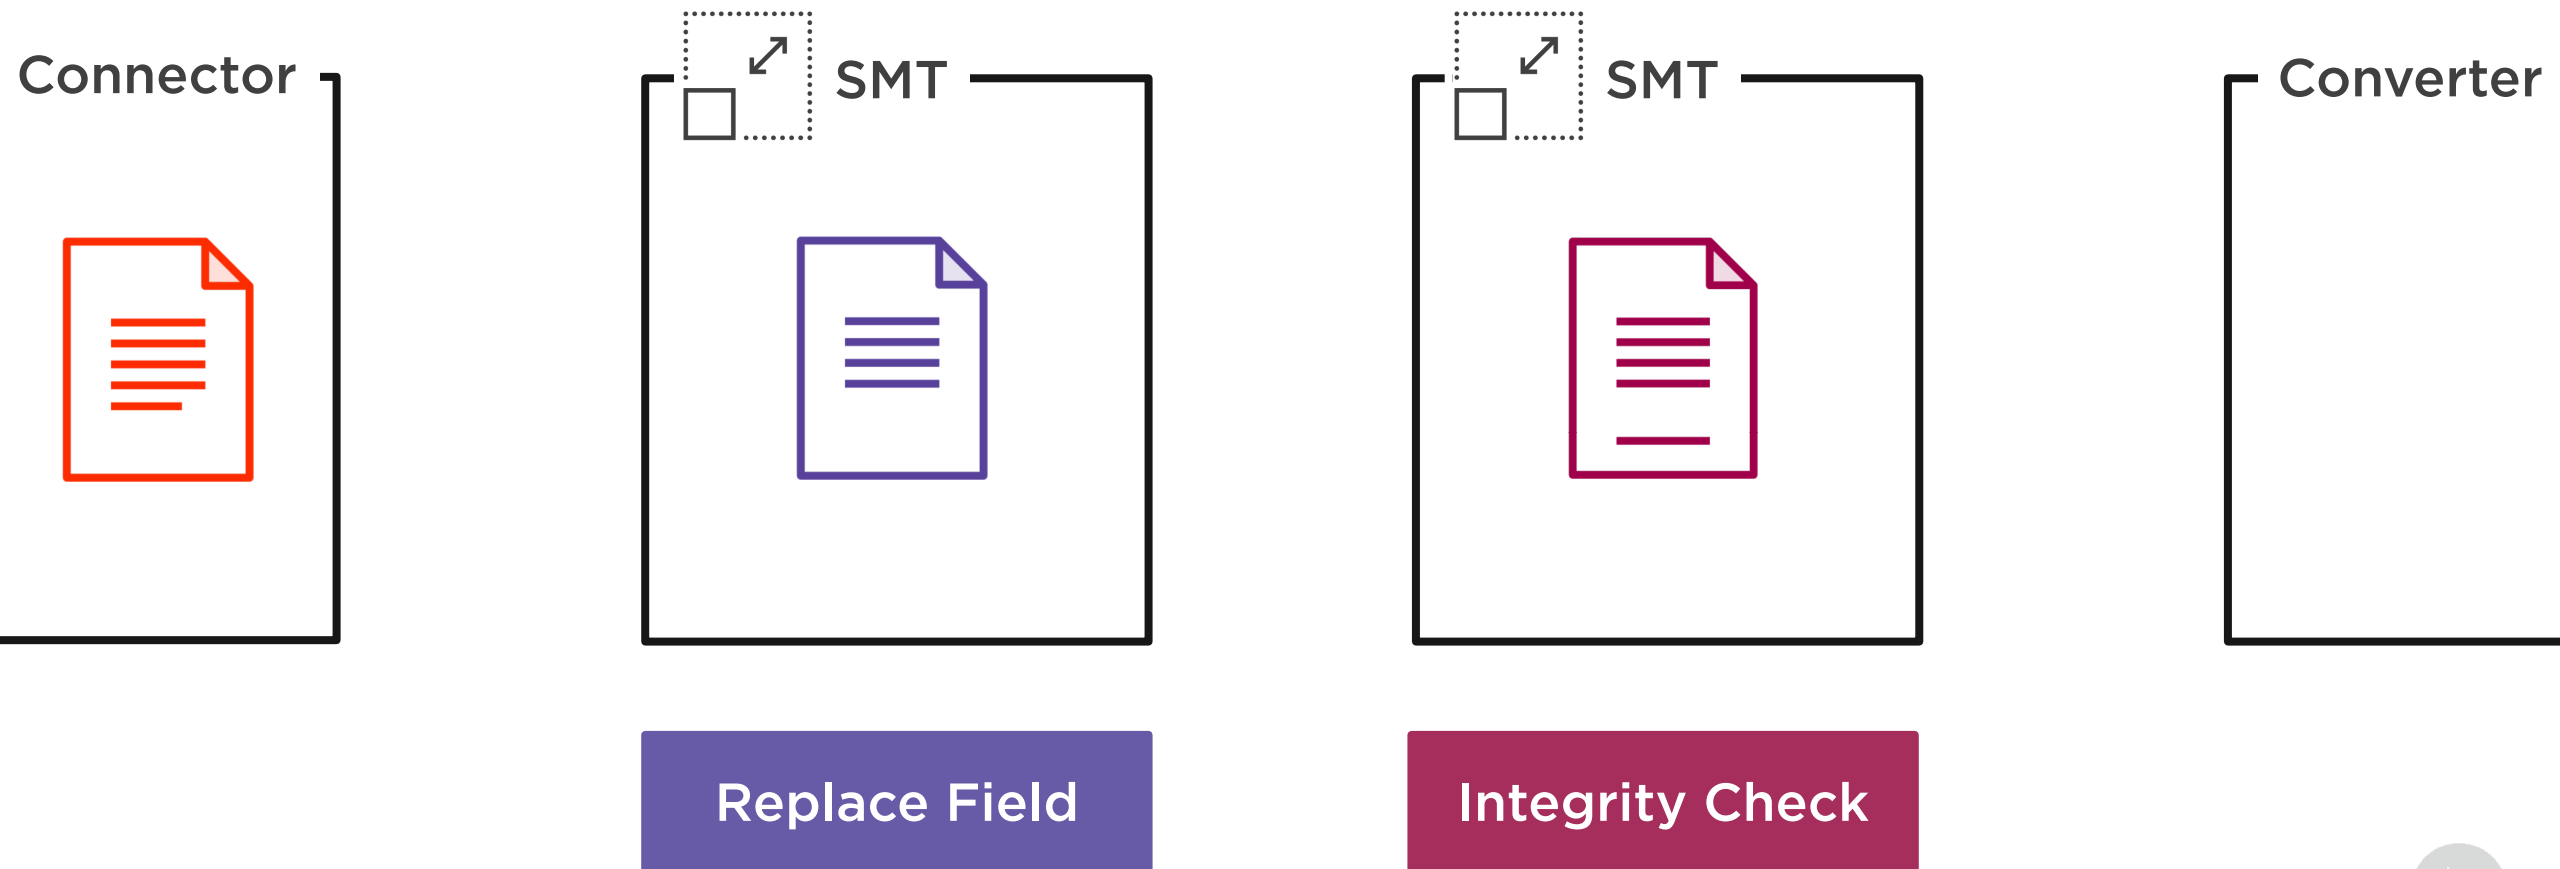

Single Message Transform

Single Message Transform (SMT)
cannot be used for Stream
Processing

Single Message Transform

Single Message Transform

Single Message Transform

Tombstone Messages

Messages with Schema

Schemaless Messages

Demo

Building Single Message Transform

Deploying Single Message Transform

SMT:

- Replace Field
- Integrity Checker

Converters

Kafka Broker Storage

Store bytes

All messages are stored in a
byte[] format

NO Serialization / Deserialization

Producers / Consumers would
have to deal with data formats

Converters

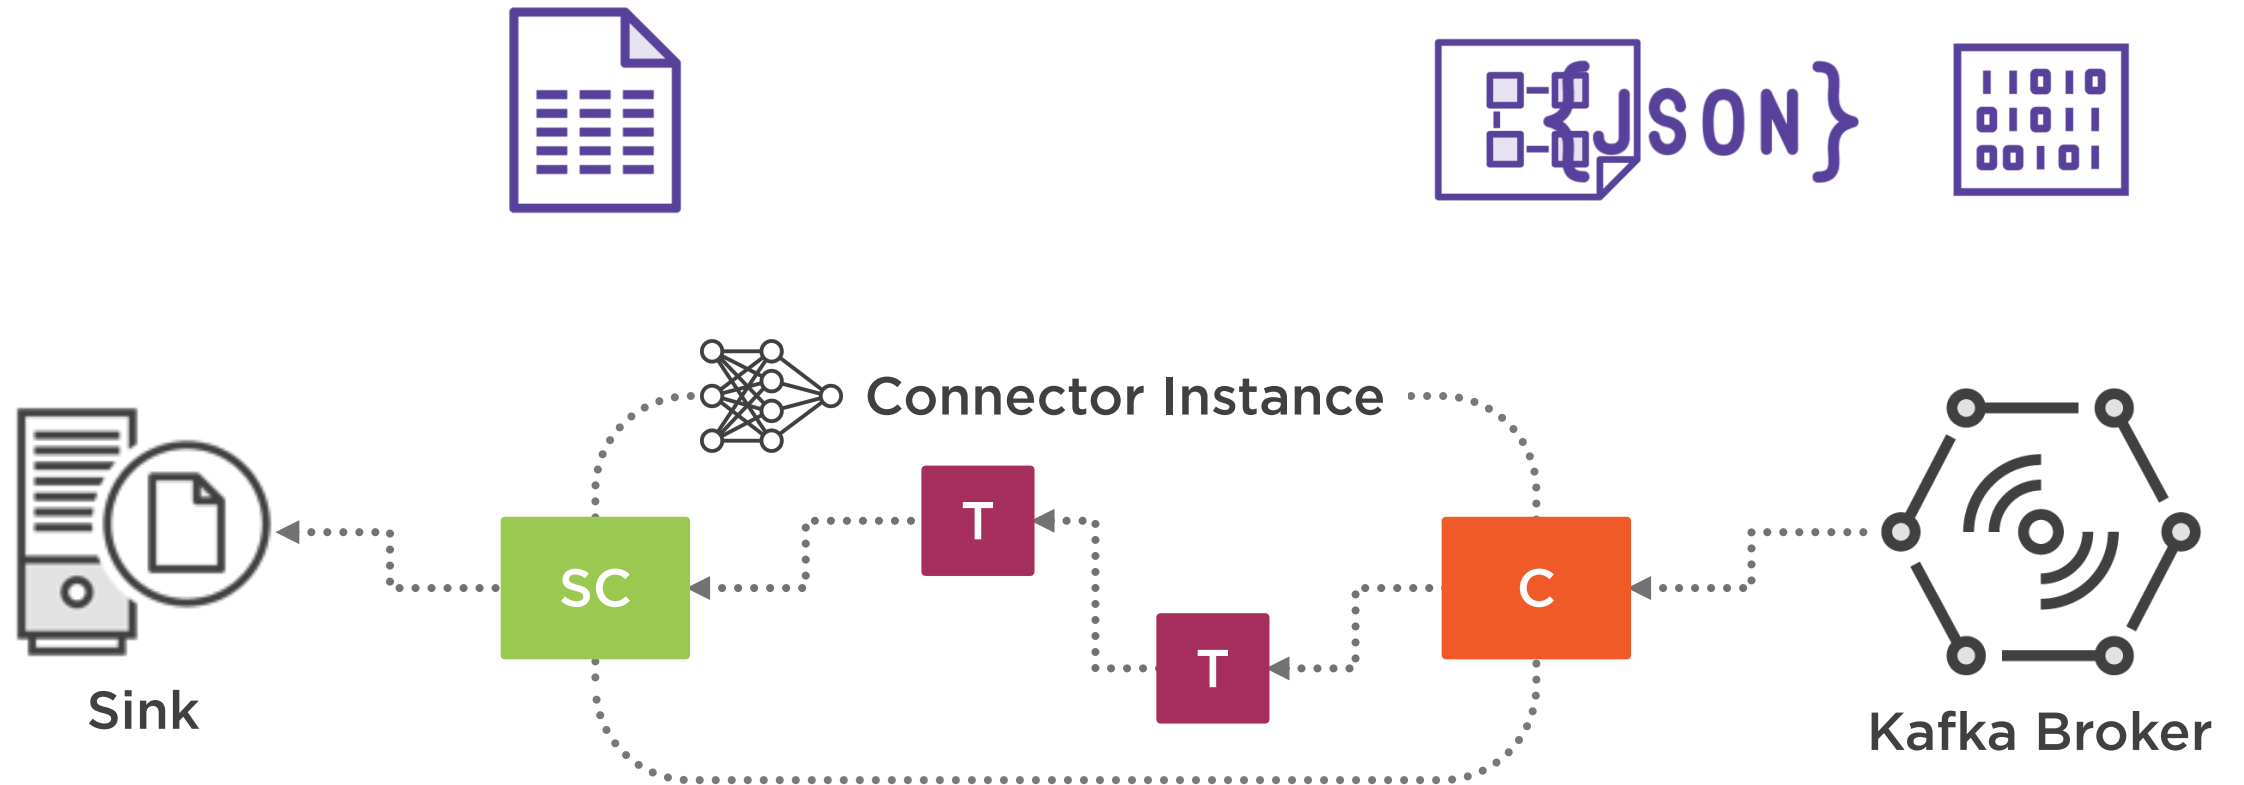

SC - Source Connector

T - Single Message Transform (SMT)

C - Converter

Converters

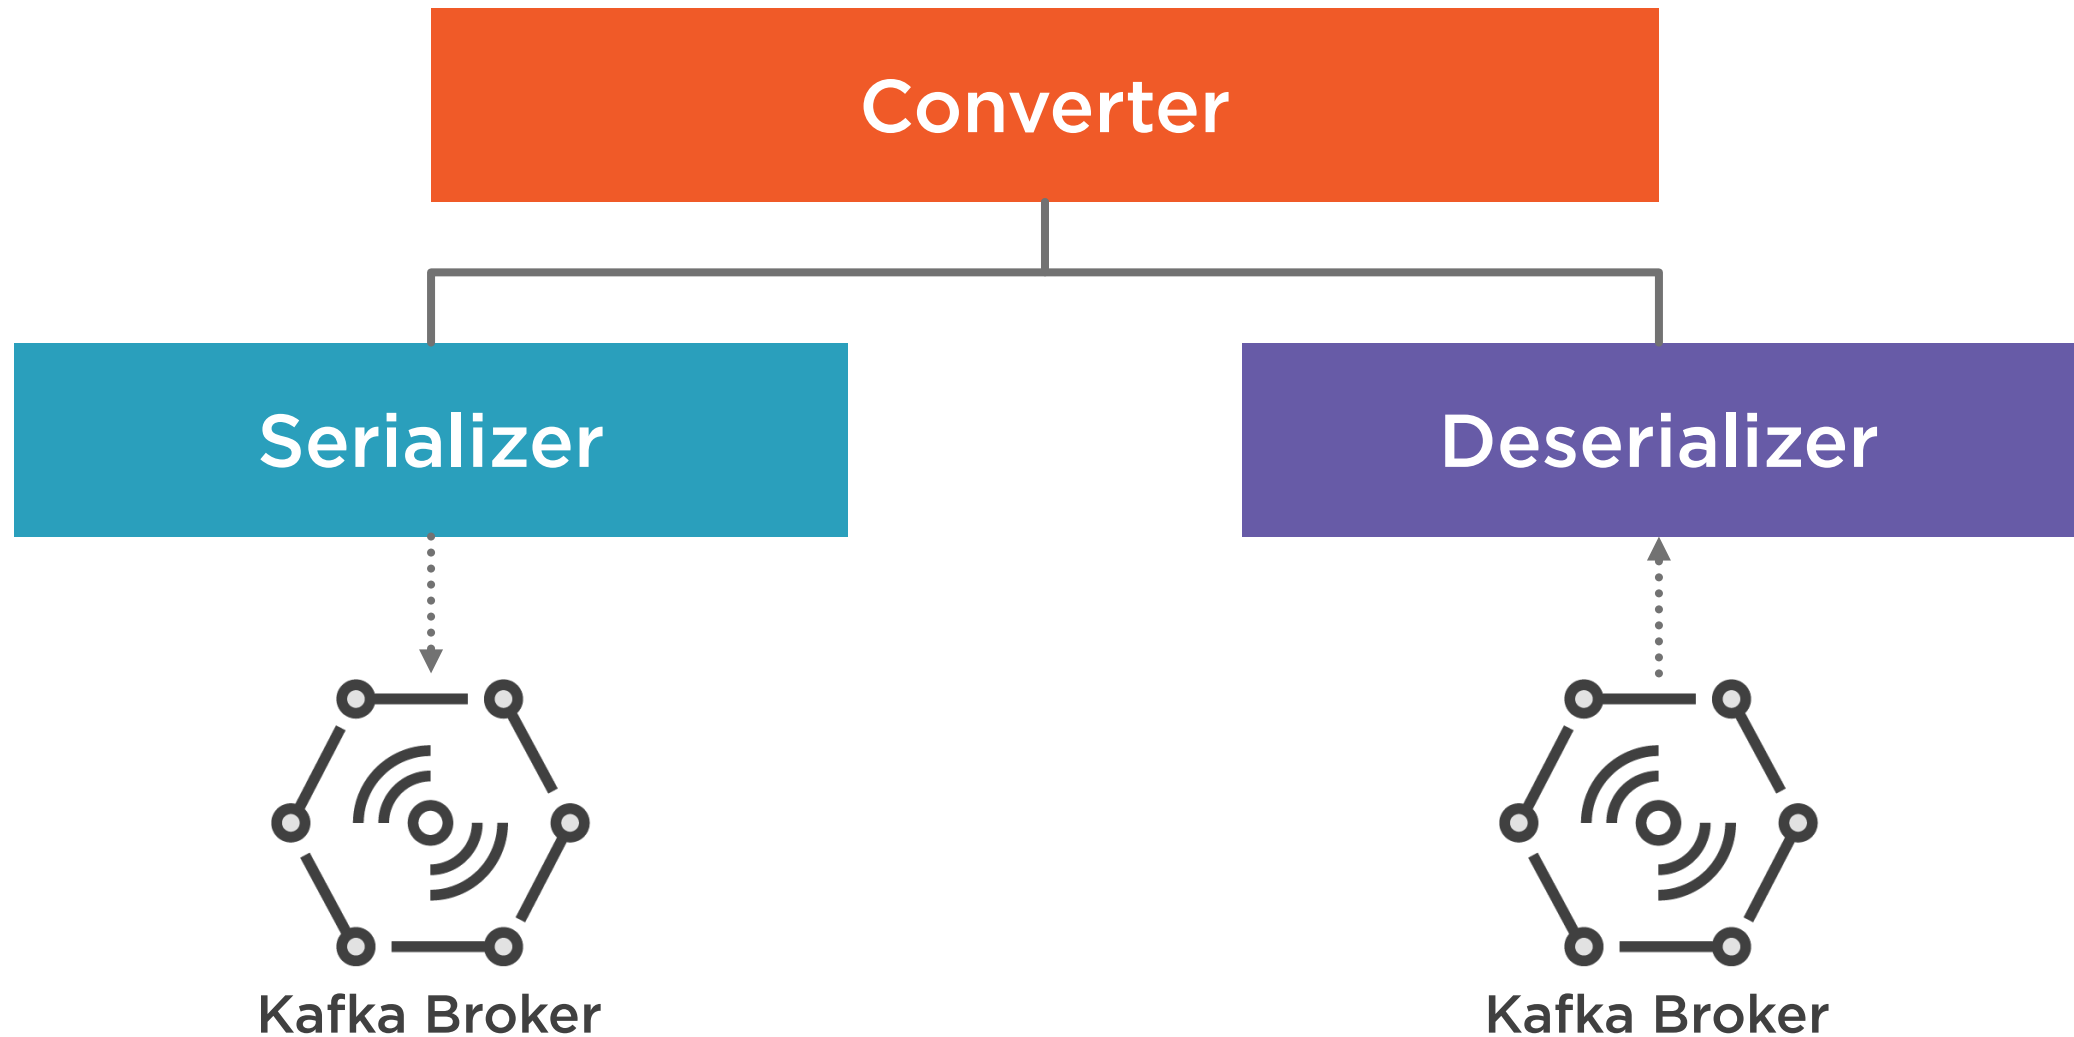

SC - Sink Connector

T - Single Message Transform (SMT)

C - Converter

Converters

Demo

String Converter

Deploy the Converter with Weather API Connector

Summary

Stream Processing vs Message Processing

Single Message Transforms

Converters
